A man with a white beard, wearing a grey tuxedo jacket, white shirt, and black bow tie, sits at a wooden poker table. He is surrounded by several humanoid robots with metallic bodies and heads. The table is covered with stacks of chips and scattered coins. A speech bubble above the man contains text.

THE FUTURE OF HEART HEALTH

Technological advancement on hearts means more lives, human and animal, will be saved in the future. New innovations such as Digital Twins and 3D-printed organs will allow doctors, researchers, and surgeons to predict health outcomes and test new therapies digitally instead of exploratory surgery or animal testing.

FAST FACTS

- Heart disease is the leading cause of death in the United States.
- Cardiovascular diseases takes an estimated 17.9 million lives globally each year.
- More than 580 million people have undiagnosed hypertension.
- Clinical trials for new heart drug therapies can cost in excess of \$150M.
- Proper training on new techniques and technologies remains the biggest challenge to medical innovation.
- Currently, animals are required for the majority of heart valve replacement testing.

- CARDIAC ANALYSIS**
Run millions of simulations on a digital twin heart to analyze performance in different conditions, such as exercising or under stress.
- ATHLETIC PERFORMANCE**
Simulate the effects of different activities and training programs to identify those that create optimal heart health, avoid injuries and optimize recovery time.
- PREDICTIVE MEDICINE**
Custom treatment plans predict the effectiveness of drugs and therapies and the impact of lifestyle choices such as diet, exercise and smoking are modeled to predict outcomes for an individual over their lifespan.
- TRAINING AND EDUCATION**
Simulate various heart conditions digitally to more effectively prepare students for real-world situations.
- SURGICAL PREPARATION AND TESTING**
Digital twin and 3D-printed hearts allow surgical experimentation and testing of new products and techniques.
- DRUG DEVELOPMENT AND TESTING**
Measure the effectiveness and safety of new drug therapies and doses on digital hearts, helping researchers develop safer and more effective treatments, reducing the need for animal testing and human trials.
- HEART CONDITION MONITORING**
Continually monitor heart rate, condition and efficiency, in real-time, to quickly identify issues or abnormalities.
